DEPARTMENT OF SCIENCE & HUMANITIES

(Applicable to Electrical & Electronics Engineering branch)

OUTCOME BASED CURRICULUM & ASSESSMENT

Scheme and Syllabus

I & II Semester

For the 2025 Admitted Batch

Kumbalgotu, Mysuru Road, Bengaluru 560074

Vision of the Institute

To be a center of excellence to transform young minds in technical and management education fostering innovation and entrepreneurial skills with ethical, environmental, and social responsibility.

Mission of the Institute

M1: To impart quality education in order to meet the needs of industry and society.

M2: To collaborate with academia, industry and research institutes to strengthen teaching and learning process.

M3: To promote equitable and harmonious development of students to work in teams.

M4: To imbibe lifelong learning skills and entrepreneurial skills exhibiting leadership.

Core Values

i) Attain excellence in different disciplines by creating, preserving and disseminating knowledge to all aspiring students

ii) Draw inspiration from the Institutions ethos and develop within its members a sense of accountability towards their community, society and the nation at large

iii) Accept the challenges globalization and changing times throw at us to offer high quality education and developmental services in a competitive manner

iv) Provide every opportunity to the Institutions key constituents—its faculty, staff, students and the community—to excel in their domain of expertise and contribute to every task with sincerity

v) Transition from the teacher – centric focus to the learner - centric approach in imparting knowledge

Vision of the Physics Department

To provide foundations of Physics for Engineering applications

Mission of the Physics Department

M1: To impart basic concepts and principles of Physics applied to Engineering Science.

M2: To imbibe the applications of Physics in the area of Oscillations, Lasers, Optical Fibre, Electrical Conductivity and Semiconductors.

Vision of the Chemistry Department

To provide foundation knowledge in Frontiers of Chemistry with Sustainability and Environmental emphasis.

Mission of the Chemistry Department

M1: To disseminate knowledge of Chemistry in the area of Electrochemistry, Corrosion Science, Engineering Materials, Water Technology, Instrumentation and Green & Sustainable Chemistry.

M2: To understanding the concepts of alternative energy sources.

M3: To afford concepts of production and utilization of few Polymers and Nanomaterials.

Vision of the Mathematics Department

Provide mathematical tools and their applications for problem solving in Engineering and Technology.

Mission of the Mathematics Department

M1: To provide the foundation and application in the area of Differential, integral and Vector Calculus, Linear and Partial differential Equations, Linear algebra, transformations applied mathematics.

M2: To provide the tools for iterative problem solving.

M3: To provide statistical and probabilistic tools for computation.

Knowledge and Attitude Profile (WK)

WK1	A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.
WK2	Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
WK3	A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.
WK4	Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.
WK5	Knowledge, including efficient resource use, environmental impacts, whole-life cost, re-use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.
WK6	Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.
WK7	Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development
WK8	Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.
WK9	Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

Program Outcomes

P01	Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
P02	Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
P03	Design/development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
P04	Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
P05	Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
P06	The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
P07	Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
P08	Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
P09	Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
P010	Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
P011	Life-long learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

Student’s Induction Program: Motivating (Inspiring) Activities under the Induction program – The main aim of the induction program is to provide newly admitted students a broad understanding of society, relationships, and values. Along with the knowledge and skill of his/her study, students’ character needs to be nurtured as an essential quality by which he/she would understand and fulfil the responsibility as an engineer. The following activities are to be covered in 21 days. Physical Activity, Creative Arts, Universal Human Values, Literary, Proficiency Modules, Lectures by Eminent People, Visits to Local areas, Familiarization with Department/Branch and Innovation, etc.

AICTE Activity Points to be earned by students admitted to BE/ B.Tech., day college program (For more details refer to Chapter 6, AICTE Activity Point Program, Model Internship Guidelines): Over and above the academic grades, every regular student admitted to the 4 years Degree program and every student entering 4 years Degree programs through lateral entry, shall earn 100 and 75 Activity Points respectively for the award of degree through AICTE Activity Point Program. Students transferred from other Universities to the fifth semester are required to earn 50 Activity Points from the year of entry to Institution.
 The Activity Points earned shall be reflected on the student’s eighth semester Grade Card. The activities can be spread over the years, any time during the semester weekends, and holidays, as per the liking and convenience of the student from the year of entry to the program. However, the minimum hours’ requirement should be fulfilled. Activity Points (non-credit) do not affect SGPA/CGPA and shall not be considered for vertical progression. In case students fail to earn the prescribed activity Points, an Eighth Semester Grade Card shall be issued only after earning the required activity points. Students shall be admitted for the award of the degree only after the release of the Eighth semester Grade Card.

The Mathematics/Physics/Chemistry courses should be taught by a single faculty member per division, with no sharing of the course (subject) module- wise by different faculty members. The **tutorial sessions** for the **Mathematics course** shall be conducted in the Laboratory environment using **MAXIMA/MATHEMATICA/PYTHON/SCI LAB/MATLAB software** to enhance computational understanding and application skills.

Students admitted to a specific engineering stream are required to select and successfully complete **Applied Mathematics-II** and **Applied Chemistry courses** that are aligned with their program stream. These courses are intended to reinforce the academic foundations and develop the professional competencies relevant to their chosen engineering discipline.

Engineering Sciences Courses-II(ESC-II): courses designed to broaden the technical knowledge of students beyond their core area of study. These courses enable students to gain a foundational understanding of engineering principles from other disciplines. Students are required to select and complete courses that do not belong to their admitted program stream. For example, a student admitted to the Civil Engineering program must choose courses such as Introduction to Mechanical Engineering or Introduction to Electrical Engineering, rather than Civil Engineering-related subjects. The course selected under Engineering Science Courses – II (ESC-II) must be different from the course chosen under ESC-I and must also not belong to the student’s admitted engineering stream.

For the course **Interdisciplinary Project based learning (B25PRJ28)**, it is mandatory to form a team comprising students from multiple engineering disciplines. For example, a project team may include students from Mechanical Engineering, Electronics and Communication Engineering (ECE), and Computer Science and Engineering (CSE), working collaboratively to design and implement the project.

Student’s Induction Program: Motivating (Inspiring) Activities under the Induction program – The main aim of the induction program is to provide newly admitted students a broad understanding of society, relationships, and values. Along with the knowledge and skill of his/her study, students’ character needs to be nurtured as an essential quality by which he/she would understand and fulfill the responsibility as an engineer. The following activities are to be covered in 21 days. Physical Activity, Creative Arts, Universal Human Values, Literary, Proficiency Modules, Lectures by Eminent People, Visits to Local areas, Familiarization with Department/Branch and Innovation, etc.

AICTE Activity Points to be earned by students admitted to BE/ B.Tech., day college program (For more details refer to Chapter 6, AICTE Activity Point Program, Model Internship Guidelines): Over and above the academic grades, every regular student admitted to the 4 years Degree program and every student entering 4 years Degree programs through lateral entry, shall earn 100 and 75 Activity Points respectively for the award of degree through AICTE Activity Point Program. Students transferred from other Universities to the fifth semester are required to earn 50 Activity Points from the year of entry.

The Activity Points earned shall be reflected on the student’s eighth semester Grade Card. The activities can be spread over the years, any time during the semester weekends, and holidays, as per the liking and convenience of the student from the year of entry to the program. However, the minimum hours’ requirement should be fulfilled. Activity Points (non-credit) do not affect SGPA/CGPA and shall not be considered for vertical progression. In case students fail to earn the prescribed activity Points, an Eighth Semester Grade Card shall be issued only after earning the required activity points. Students shall be admitted for the award of the degree only after the release of the Eighth semester Grade Card.

The Mathematics/Physics courses shall be taught by a single faculty member per session, with no sharing of the course (subject) modules. The tutorial sessions for the Mathematics course shall be conducted in the Laboratory environment using MATLAB software to enhance computational understanding and application skills

For the course Interdisciplinary Project (B25PRJL29), it is mandatory to form a team comprising students from multiple engineering disciplines. For example, a project team may include students from Electrical Engineering (EEE), Electronics and Communication Engineering (ECE), and Computer Science and Engineering (CSE), working collaboratively to design and implement the project.

Programme Specific Courses (PSC): Programme Specific Courses (PSC) are a set of core courses tailored to a specific branch or discipline of engineering in which a student is enrolled (e.g., Mechanical Engineering, Computer Science, Civil Engineering, etc.). These courses are intended to provide students with in-depth knowledge and specialized skills essential for professional competence in the chosen field. Students must select and complete the course from this group that corresponds to their admitted program stream. Similarly, students are also required to choose and pass laboratory courses that are specific to their stream from the Programme Specific Courses Laboratory (PSCL) group.

Engineering Sciences Courses-I(ESC-I): These courses are designed to broaden the technical knowledge of students beyond their core area of study. These courses enable students to gain a foundational understanding of engineering principles from other stream courses. Students are required to select and complete two courses that are not belong to their admitted program stream. For example, a student admitted to the any programme of the Civil Engineering stream should not select Introduction to Building Sciences but any other two. One course shall be selected under ESC-I and another course under ESC-II. The two courses must be different from the other

Computer-Aided Engineering Drawing: The courses under this category are stream-specific. Students must select and complete the course that corresponds to their admitted engineering stream.

ASSESSMENT PATTERN

Alternative Assessment Tool (AAT):

In order to encourage innovative methods while delivering a course, the faculty members have been encouraged to use the Alternative Assessment Tool (AAT). Thus AAT enables faculty to employ innovative methods and design own assessment patterns during the CIE. The AAT enhances the autonomy (freedom and flexibility) of individual faculty and enables them to create innovative pedagogical practices. If properly applied, the AAT converts the classroom into an effective learning space. **Some possible AAT are:** QUIZ / seminar/ assignments / term paper / open ended experiments / mini-projects / concept videos / partial reproduction of research work / oral presentation of research work / group activity / developing a generic tool-box for problem solving / report based on participation in create-a-thon / make-a-thon / code-a-thon / hack-a-thon conducted by reputed organizations / any other.

COURSE LEARNING OBJECTIVES
<p>The objective of the Course is to</p> <ol style="list-style-type: none"> 1. Familiarize the importance of calculus associated with one variable and multivariable for Electrical and Electronics engineering. 2. Analyze Electrical and Electronics engineering problems by applying Ordinary Differential Equations. 3. Familiarize the important tools in Integral Calculus that are essential in Electrical and Electronics engineering. 4. Develop the knowledge of Linear Algebra to solve the system of equations.

PRE REQUISITES
Fundamentals of Differential Calculus, Integral Calculus and Matrix Theory.

MODULE #	TOPICS	Hours
1	<p>DIFFERENTIAL CALCULUS</p> <p>Polar curves, angle between the radius vector and the tangent, angle between the polar curves, pedal equations. Curvature and radius of curvature in Cartesian, polar, parametric and pedal forms.</p>	9L+6T
2	<p>POWER SERIES EXPANSIONS, INDETERMINATE FORMS AND MULTI - VARIABLE CALCULUS</p> <p>Statement and problems on Taylor's and Maclaurin's series expansion for one variable. Indeterminate forms-L'Hospital's rule.</p> <p>Partial Differentiation: Partial differentiation, total derivative- differentiation of composite functions. Jacobian, Maxima and minima for a function of two variables.</p>	9L+6T
3	<p>ORDINARY DIFFERENTIAL EQUATIONS (ODE) OF FIRST ORDER AND FIRST DEGREE AND NONLINEAR ODE</p> <p>Exact and reducible to exact differential equations-Integrating factors on $\frac{1}{N} \left(\frac{\partial M}{\partial y} - \frac{\partial N}{\partial x} \right)$ and $\frac{1}{M} \left(\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y} \right)$. Linear and Bernoulli's differential equations. Orthogonal trajectories, L-R and C-R circuits. Non-linear differential equations: Introduction to general and singular solutions,</p>	8L+6T

SEMESTER I / II SYLLABUS (Academic Year: 2025-2026)

4	<p>ORDINARY DIFFERENTIAL EQUATIONS OF HIGHER ORDER</p> <p>Higher-order linear ODEs with constant coefficients, homogeneous and non-homogeneous equations - e^{ax}, $\sin(ax+b)$, $\cos(ax+b)$, x^n only. Method of variation of parameters, Cauchy's and Legendre's homogeneous Differential equations. L-C-R circuits.</p>	8L+6T
5	<p>LINEAR ALGEBRA</p> <p>Elementary transformations on a matrix, Echelon form, rank of a matrix, consistency of system of linear Equations. Gauss elimination, Gauss –Seidel method to solve system of linear equations. Eigen values and Eigen vectors of a matrix, Rayleigh power method to determine the dominant Eigen value of a matrix.</p>	8L+6T

TEACHING-LEARNING PROCESS:

Pedagogy (General Instructions):

These are sample strategies, which teachers can use to accelerate the attainment of the various course outcomes.

- In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the delivered lessons shall develop students' theoretical and applied mathematical skills.
- State the need for Mathematics with Engineering Studies and Provide real-life examples.
- Support and guide the students for self-study.
- You will also be responsible for assigning homework, grading assignments, quiz and documenting students' progress.
- Encourage the students to group learning to improve their creative and analytical skills.
- Show short related video lectures in the following ways:
 - As an introduction to new topics (pre-lecture activity).
 - As a revision of topics (post-lecture activity).
 - As additional examples (post-lecture activity).
 - As an additional material of challenging topics (pre-and post-lecture activity).
 - As a model solution of some exercises (post-lecture activity).

TEACHING-LEARNING PROCESS:**Pedagogy (General Instructions):**

1. Students should be made aware of powerful engineering communication tool –Drawing.
2. Simple Case studies can be suitably selected by the teacher for hands on practice to induce the feel of fruitfulness of learning.
3. Appropriate Models, Power Point presentation, Charts, Videos, shall be used to enhance visualization before hands on practice.
4. For application problems use very generally available actual objects. (Example: For rectangular prism / object; matchbox, carton boxes, book, etc. can be used. Similarly for other shapes)
5. Use any CAD software for generating orthographic and pictorial views. Make use of sketch book with graph sheets for manual / preparatory sketching

TEACHING-LEARNING PROCESS:

Pedagogy (General Instructions):

1. These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.
2. Lecturer method (L) needs not to be only traditional lecture method, but alternative effective teaching methods could be adopted to attain the outcomes.
3. Use of Video/Animation to explain functioning of various concepts.
4. Encourage collaborative (Group Learning) Learning in the class.
5. Ask at least three HOT (Higher order Thinking) questions in the class, which promotes critical thinking.
6. Adopt Problem Based Learning (PBL), which fosters students' Analytical skills, develop design thinking skills such as the ability to design, evaluate, generalize, and analyze information rather than simply recall it.
7. Introduce Topics in manifold representations.
8. Show the different ways to solve the same problem with different circuits/logic and encourage the students to come up with their own creative ways to solve them.

Discuss how every concept can be applied to the real world-and when that's possible, it helps improve the students' understanding.

TEACHING-LEARNING PROCESS:

Pedagogy (General Instructions):

1. **Pre-Lab Preparation** – Brief introduction of theory, objectives, apparatus, and safety instructions; students answer pre-lab questions to ensure readiness.
2. **Hands-on Experimentation** – Students perform experiments under guidance, focusing on correct use of instruments, data collection, and teamwork.
3. **Data Analysis & Error Estimation** – Students calculate results, plot graphs, and analyze errors to connect outcomes with theory.
4. **Discussion & Application** – Teacher facilitates reflection on results, deviations, and real-world applications of the experiment.
5. **Assessment** – Evaluation through lab records, viva, performance, and clarity of understanding.

2. Students are expected to come prepared at home with the experiments which are going to be performed.
3. Students are instructed to wear their identity cards before entering into the lab.
4. Students are instructed not to bring mobile phones to the lab.
5. Any damage/loss of system parts like Meters, Components during the lab session, it is student's responsibility and penalty or fine will be collected from the student.
6. Students should update the records and lab observation books session wise. Before leaving the lab the student should get his lab observation book signed by the faculty.
7. Students should submit the lab records by the next lab to the concerned faculty members in the staffroom for their correction and return.
8. Students should not move around the lab during the lab session.
9. If any emergency arises, the student should take the permission from faculty member concerned in written format.
10. Never copy the output from other students. Write down your own outputs.

Safety precautions:

1. Students are supposed to come to the lab with preparation, proper dress code and the set of tools required
2. Don't switch on the power supply without getting your circuit connections verified.
3. Disciplinary action can be taken in the event of mishandling the equipment or switching on the power supply without faculty presence.
4. All the apparatus taken should be returned to the Lab Assistant concerned, before leaving the lab.

TEACHING-LEARNING PROCESS:

Pedagogy (General Instructions):

The following are sample strategies that educators may adopt to enhance the effectiveness of the teaching-learning process and facilitate the achievement of course outcomes.

1. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the delivered lessons shall develop students' theoretical and applied mathematical skills.
2. State the need for Mathematics with Engineering Studies and Provide real-life examples.
3. Support and guide the students for self-study.
4. You will also be responsible for assigning homework, grading assignments, quiz, and documenting students' progress.
5. Encourage the students to group learning to improve their creative and analytical skills.
6. Show short-related video lectures in the following ways:
 - As an introduction to new topics (pre-lecture activity).
 - As a revision of topics (post-lecture activity).
 - As an additional material of challenging topics (pre-and post-lecture Activity)
 - As additional examples (post-lecture activity).
 - As a model solution of some exercises (post-lecture activity).

Sl.No	Activity on Creating Effective Prompts
1	Basic Prompt writing: Create two different prompts to ask an AI about the topic "Electricity." The first prompt should be vague, and the second prompt should be clear and specific. Compare the responses you get and describe which prompt gave a better answer and why.
2	Zero-Shot Prompting: Create a prompt that asks an AI to explain Ohm's Law without giving any example or background. Evaluate how well the AI explains the concept based on your prompt alone.
3	One-Shot and Few-Shot Prompting: Provide the AI with a single example of how to calculate the resistance in a simple circuit. Then write your own prompt asking the AI to solve a similar resistance calculation. After that, add two more examples to your prompt and observe any changes in the AI's response quality.
4	Chain-of-Thought Prompting: Develop a prompt that guides the AI step-by-step through calculating current flow in a circuit using Ohm's Law with resistors in series. Then, ask a final question for the AI to solve. Analyze how breaking down the reasoning steps impacts the accuracy of the answer.
5	Prompt Refinement: Start with an ambiguous prompt related to the "Water Cycle." Test the AI's response, note the confusion or errors, and then refine your prompt to make it clearer and more specific. Repeat this process twice and record how the AI's responses improve with each refinement. Role-Based Prompting: Create three prompts asking the AI to explain "Newton's Laws of Motion," each with a different role instruction: (a) as an expert engineer, (b) as a high school teacher, (c) as a beginner. Compare the tone, detail, and style of the responses.
6	Creative Engineering Problem Prompts: Craft a prompt that asks the AI to brainstorm ideas for designing a low-cost water purification system suitable for rural areas. Encourage creativity by adding phrases like " limited resources " and " sustainability ".
7	Ethical Prompt Design Discussion: Identify a biased prompt related to job descriptions (e.g. language with respect to a gender). Rewrite the prompt to remove bias and create a neutral, inclusive version. Explain why this revision is more ethical.
8	Simulated Customer Support Chatbot: Develop a prompt that instructs the AI to play the role of a technical support agent helping a customer troubleshoot a failure in an electronic circuit. Include instructions to keep the tone friendly and professional and to ask diagnostic questions.

SEMESTER I/II SYLLABUS (Academic Year: 2025-2026)

9	Multi-Language Prompting: Develop a prompt that asks the AI to translate a simple engineering glossary (5 technical terms) from English to your native language. Then modify the prompt to request additional explanations of these terms in the translated language.
10	Review a curated set of different prompt types (e.g., for summarization, information extraction, paraphrasing, question answering) from a “Prompt Gallery.” For each prompt type, match it with a real world task (e.g., summarizing a lecture note, extracting names from a project report). Test at least three prompt templates on an AI tool or by role-play (students simulate being the AI), with varied wording. Record the outcomes and discuss which prompt (or template) was most effective for each task, and explain why you think it worked best. Reflect on how changing small parts of a prompt can alter model response quality, completeness, or accuracy.
11	Choose a real engineering challenge or societal problem relevant to your field (e.g., “Reducing plastic waste in campus cafeterias” or “Optimizing solar panel placement on campus rooftops”). Draft an initial prompt that asks an AI to propose practical solutions. Share the AI’s (or peer’s) answer in small groups and identify aspects that are missing, vague, or not actionable. Refine your prompt based on feedback (e.g., specify constraints, ask for step-by-step solutions, or require a list of pros and cons). Repeat the process one more time, refining again for further clarity or specificity. Document the entire prompt-refinement process and share the best solution generated, along with a brief analysis of how prompt improvements led to better responses.

COURSE OUTCOMES:

At the end of the Course, student will be able to:

TEACHING LEARNING PROCESS PEDAGOGY (GENERAL INSTRUCTIONS):

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. Lecture method (L) does not mean only traditional lecture method, but different type of teaching methods may be adopted to develop the outcomes.
2. Show Video/animation films to explain evolution of communication technologies.
3. Encourage collaborative (Group) Learning in the class
4. Ask at least three HOTS (Higher order Thinking) questions in the class, which promotes critical thinking
5. Adopt Problem Based Learning (PBL), which fosters students' Analytical skills, develop thinking skills such as the ability to evaluate, generalize, and analyze information rather than simply recall it.
6. Show the different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them.
7. Discuss how every concept can be applied to the real world. and when that's possible, it helps to improve the students' understanding.

COURSE OUTCOMES:

At the end of the Course, student will be able to:

CO #	Course Outcome Statement
CO1	Develop simple applications in C using basic constructs
CO2	Demonstrate the use of Control structures and preprocessors
CO3	Explore Arrays and User-Defined Functions in Implementing Solutions to Real world Problems
CO4	Describe the concept of Strings, Pointers and Structures.
CO5	Implement functions towards performing operations on Files.

TEACHING-LEARNING PROCESS:

Pedagogy (General Instructions):

- 1) Lecture method (L) need not to be only traditional lecture method, but alternative effective teaching methods could be adopted to attain the outcomes.
- 2) Use of Video/Animation to explain functioning of various concepts.
- 3) Encourage collaborative (Group Learning) Learning in the class.
- 4) Adopt Problem Based Learning (PBL), which fosters students' Analytical skills, develop design thinking skills such as the ability to design, evaluate, generalize, and analyze information rather than simply recall it.
- 5) Introduce Topics in manifold representations.
- 6) Show the different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them.
- 7) Discuss how every concept can be applied to the real world- and when that's possible, it helps to improve the students' understanding

Suggested Pedagogical approaches

- 1) Mind map
- 2) Think Pair share
- 3) Flipped classroom
- 4) Cross word puzzle
- 5) Problem based learning

COURSE LEARNING OBJECTIVES

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods.
- Introduce practical applications of chemistry concepts to engineering problems.
- Know the laboratory practices implemented in research and industrial setting.

PREREQUISITES

Basic understanding of acids, bases, and pH scale.

Understanding of water hardness (temporary & permanent) and Use of indicators.

Basic programming skills and Data input/output in programming.

Safety precautions when handling burners and glassware.

COURSE LEARNING OBJECTIVES

1. Introduce to students to the field of programming using C language.
2. To learn problem solving techniques.
3. The students will be able to enhance their analyzing and problem solving skills and use the same for writing programs in C
4. To enable the students to debug programs.

PREREQUISITES

C Programming Language

PART A

Sl. No.	LIST OF PROGRAMS
	Get familiarize with simple programs involving the concepts of I/O functions, operators and expressions
1	Write a C program to find roots of a Quadratic equation. Display appropriate messages.
2	Write a C program to find the total no. of digits and the sum of individual digits of a positive integer.
3	Write a C program to find factorial of a number without recursion
4	Write a C program to generate the Fibonacci sequence of first N numbers without recursion
5	Write a C program to find the reverse of a positive integer and check for palindrome or not. Display appropriate messages.

PART B

6	Write a C program to arrange the elements of an integer array using Bubble Sort algorithm.
7	Write a C program to search for an element in an array using Binary Search algorithm and print appropriate message.
8	Write a C program to input two matrices and perform matrix multiplication on them.
9	Write a C program to check whether the given string is palindrome or not i) Using library functions ii) Without using Library functions.
10	Write a C program to generate Prime numbers in a given range using user defined function.
11	Write a C program to count the number of lines, words and characters in a given text.
12	Write a C program to maintain a record of n student details using an array of structures with

four fields - Roll number, Name, Marks and Grade. Calculate the Grade according to the following conditions.

Marks	Grade
>=90	O
>=80	A+
>=70	A
>=60	B+
>=55	B
>=50	C
>=40	P
<40	F

Print the details of the student, given the student Roll number as input

COURSE OUTCOMES:

At the end of the Course, student will be able to:

CO #	Course Outcome Statement
CO1	Apply the concept of Control Structures to solve any given problem.
CO2	Apply the concept of single and multi-dimensional arrays to solve problems related to searching, sorting and matrix operations.

COURSE LEARNING OBJECTIVES

1. Understand and Apply the basics of verbal, non-verbal communication for clear and effective expressions.
2. Practice Communication Strategies for group discussion, presentations, teamwork, and professional interactions
3. Able to Draft formal letters and professional email with proper etiquette and structure
4. Demonstrate proficiency in online communication while maintaining Professionalism and etiquette
5. Use digital platforms for collaboration, assignments, and communications.

PREREQUISITES

1. Basic knowledge of English grammar and sentence.
2. Fundamental speaking and listening ability
3. Familiarity with digital tools.
4. Fundamental English writing skills

MODULE #	TOPICS	Hours
1	COMMUNICATION SKILLS Glimpses of Essential English for Engineers (General Overview). Communication Skills: Process, Verbal and Non-Verbal, Proxemics, Chronemics and Barriers. Writing: Word Classification – Parts of Speech, Sentence structures. Speaking & Listening: Listening to English Pronunciation – English Phonemes – Intelligible Accent – Speech Organs- Syllable Structures, Intonation, and Practice.	02
2	INTERPERSONAL SKILLS Speaking: Role Play Exercises Based on Workplace Contexts, Introducing Oneself - PEP Talks- Personal Empowerment, participating in Group Discussion and Debates, Giving Technical Presentation. Reading: Reading the Interview of an Achiever (Skimming and Scanning) (Case Studies). Writing: Writing a Short Biography of an Achiever Based on given reflections, Grammar: Sentence patterns. Vocabulary Development: Idioms and Phrases.	03

Pedagogy (General Instructions):

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes and make Teaching -Learning more effective: Teachers shall adopt suitable pedagogy for effective teaching - learning process. The pedagogy shall involve the combination of different methodologies which suit modern technological tools and software's to meet the present requirements of the Global employment market. (i) Direct instructional method (Low/Old Technology), (ii) Flipped classrooms (High/advanced Technological tools), (iii) Blended learning (Combination of both), (iv) Enquiry and evaluation based learning, (v) Personalized learning, (vi) Problems based learning through discussion, (vii) Following the method of expeditionary learning Tools and techniques, (viii) Use of audio visual methods through language Labs in teaching of LSRW skills. Apart from conventional lecture methods, various types of innovative teaching techniques through videos, animation films may be adapted so that the delivered lesson can progress the students In theoretical applied and practical skills in teaching of communicative skills in general.
